

# European partnerships for a sustainable development

Wednesday 8th November, h 5.30 pm

at Ecomondo | Rimini Expo Centre, sala Diotallevi 2 (1° floor, South Hall)

Federchimica Assobiotech, the Italian association for the development of biotechnology, in collaboration with Ecomondo Scientific Technical Committee, organizes the event to underline the role of the biosolutions – biology-based scientific innovation and commercialization – as an integral part of the European strategy to achieve the goal of the green transition.

To unleash the full potential of these biosolutions, international partnerships are fundamental.

During the event an agreement will be signed between Federchimica Assobiotech and Biosolution Coalition, a European organization that aims at overcoming the political barriers for the development of these biotech products to generate value for our society and for the whole planet.

## Program

### •• *Introductory greetings*

**Christian Patermann**, Advisor & Former Director at DG RTD, Environment and Bioeconomy, European Commission

### •• *The Italian political strategies for the bioeconomy and the value of an international network*
